**Adobe Photoshop is the most popular graphics program available.** Its high-end features (a suite of tools and plug-ins) help photographers, illustrators, designers and anyone else who creates graphics. Adobe Photoshop and GIMP are both fantastic programs for creating graphics and photos. They both offer a ton of great features and can both be used to create quick and professional graphics. However, you may need to pay a little extra to use the advanced aspects of GIMP, but if you spend the money you will get your money worth. So which one should you use?

Adobe Photoshop Element is a great tool that was brought to life by the company Adobe. It was created by a team of experts that had the belief in using its current technology then pushing it further to create a product that can save users a lot of time. Although Adobe Photoshop couldn't have anticipated the transformation of the online market it's tampering with, it was also trying to anticipate the disruption of the internet that was on the rise. Adobe's team was able to adapt as the market evolved and expanded. Why is the writer of the review very disappointed with the program? It is because the software lacks the ability to combine graphics and other elements together. The review is simplified by this the program fails to produce attractive looking images. The impact of the review is that the user will not want to buy or install the program because it doesn't meet the expectations approached by the vendor. Also since it lacks in meeting the user's hopes the user will abandon it. Though Photoshop is one of the most popular imaging applications today, it is still lacking some features that are missing in some other programs like Paint Shop Pro. Having more than 400 features, it is not the best app from the software giant. To give you overview, I will limit myself to examining ten of the coolest features that are yet to be implemented. Thoughts of whether the extension is licensed or trial version is meaningless when it comes to the review. The review is an unfree, user-friendly software; hence, you should be able to use it any time you like. The license available for the trial version is free for personal, non-commercial use. Though the extensions are not free, it doesn't have a free trial.

Well, despite regulations made by the Association of National Underwater and Hyperbaric Medical Societies, there are plenty of fakes in the underwater realm. How can one tell if a photograph is fake? In many cases the easiest way is just to **look at the destination** where the photo was taken. Smart phone camera's have led to the more realistic looking photographs. While it is very easy to replicate what it looks like photos were taken in New York, it is much more difficult to mimic a photo taken in Bangkok. Having some technical knowledge can help you figure out if the photographs are real. There are two ways to go about looking at the image. The first way is to look at the image as it is, and try and match it to the photos, like Phayong's C-Borderns Bloominpretties . If these photos are enough, chances are the photo is real.
