After Lightroom imports RAW files, the next step is to make the changes to the images in the editing app. Photoshop CC ensures that the imported images are in the correct size and there are no camera-specific resolution limitations. The details of Lightroom's adjustments can be exported as Photoshop layers using the Export for Lightroom plug-in in the DNG Viewer. But first, you have to convert the images to the Adobe RGB colour space. I suppose it is not too difficult as the plug-in can perform the conversion for you but I gave up after a few failed attempts. I would also like to mention that, if you have the latest version of Photoshop CC, you need to be careful with the import option. Although the Import dialog box states that it is compatible with H.264+PGA and H.264, you need to select AVP only in the codec selection. Without it, the import would fail. Adobe Photoshop Elements is a photography-focused program, but it's also a great tool for imaging-minded freelancers and professionals who work with small businesses, charities and non-profit organizations. A lot of the tools and features are skewed towards making your images professional enough to share with clients and to promote to potential sponsors and donors. Websites and social networks that showcase your photographs, for example, are quite frequently the first places where a client assesses your work, and a good photo portfolio can be the differentiator between an amateur and a professional. It is a real testament to the determination of Adobe that it continues to improve its image editing software. It is clearly working with a team of hundreds of talented people. Over the years, Photoshop and Lightroom have become indispensable tools for photographers of all levels. They are unmatched in terms of their flexibility, stability and efficiency, although that is another topic. I am simply too busy to switch between tools, so I tend to use Lightroom's supplied panel plugins (e.g. Histograms and Question Markers) where I have to examine large amounts of data. At the same time, I do not care for the simplicity of the OS X window views, so I find myself using Preview's OS X window a lot to view untagged pictures and only occasionally opening an image in Photoshop.

With Share for Review, designers can work together on a project from any device to review and comment on an image online, without leaving Photoshop. Designers can zoom in to specific areas by tapping to select the area, and refine the selection from within Photoshop, without the need to switch apps. Users can also see a running list of comments gathered when viewing the image in Photoshop, and can reply from within Photoshop. Mobile check-ins are also now possible. To accelerate collaboration and sharing, Photoshop now includes an intuitive navigation bar with a top level workspace for a clean, easy mechanism to navigate around a composition. Users can switch between panels, objects and layers from the navigation bar. Photoshop will also automatically adjust tool sizes to match the available work area, and become progressively translucent when the work area is out of bounds to provide more visibility, so users do not need to reduce opacity to see the entire Photoshop workspace. This change is driven by extensive experimentation with the new navigation bar, and it is now recommended as the preferred method for navigating Photoshop. "Our customers have long asked for a better collaboration workflow for Photoshop, and the team has been listening. Thanks to the feedback we received during internal tests and our own experience with the navigation bar, we have designed a significant shift in how designers interact with Photoshop, and how they can collaborate," said Chris Nassen, senior director of product innovation, Adobe, and lead architect for Share for Review.

These tools—which are accessible from the File menu on the main menu bar—supply a single action for easily tagging and replacing objects across all layers and smartly differentiate between images, video and other assets to provide quick access to a library of replacement content.
